

CoolOver® sheets keeps you dry

Coolover has a 3D “spacer” knit which allows air to move more freely keeping you cooler as sweat can more easily evaporate and drier as moisture is moved away from the skin.

Inherent free draining characteristics allow any fluids which may otherwise cause redness or rashes to drain away from the skin.

Not only is Coolover available for sheets and covers, it is now used as the standard liner in our soft knee blocks and the facing of our bracket pads as well as in our Airmantle.

Omnitherm® Thermal Comfort

Bamboo sheets and cushion covers

The natural wicking fabric that helps to keep you cool

This natural eco-friendly textile has both anti-bacterial and anti-fungal properties so stays “fresh” for longer. It’s smooth, round fibres are knitted in to a silky super soft fabric for a luxury feel.

Bamboo fibres have a hollow tube like construction so they tend to wick moisture away from the skin aiding evaporation and keeping the skin cool and dry, (Bamboo can hold more than 3 times its own weight in water).

This latest Bamboo is used for our standard sheets and pillow covers. For still greater thermal stabilisation you may want to consider Coolover as an alternative.
