

Symmetrisleep and temperature stabilization

AIRMANTLE[®]

with Coolover

Airmantle has been designed to work with Symmetrisleep, allowing those who need night time support to enjoy the benefits of improved thermal comfort.

Heat seeking and avoidance

During the night, we regularly rearrange our bedclothes to help maintain a constant body temperature. Airmantle helps those who cannot make these adjustments for themselves; it puts a layer of air around the user allowing perspiration to evaporate so helping to maintain core temperature. and reduce disturbance at night.

It can be washed as a whole or covers and core can be washed separately.

Use it knitted side up for temperature regulation. Any spillage cannot pass through the base so bedding underneath is protected. Use it base side up if heavy spillage is likely then use a Coolover top-sheet for temperature regulation.

We can also supply Airmantles with polyurethane on both sides and a layer of Omnitherm to regulate temperature under the PU.

CoolOver[®] and thermal comfort

CoolOver fabrics can be used instead of our Bamboo to enhance thermal comfort by working right up close. This all new soft feel Hypo Allergenic fabric contains tiny Omnitherm microcapsules; these absorb excess heat when the body is hot and release it back when the body cools to maintain a more even temperature for a better night's sleep. Having the Omnitherm embedded in the fibres themselves, rather than being in a separate inner layer, gets them closer to the skin to offer our most effective temperature stabilizing fabric to date.
